

Abstract for the 2013 AMS in Austin Texas

Title: Challenges for Transitioning Science Research to Space Weather Applications

Author: James Spann

NASA, Marshall Space Flight Center, ZP10, MSFC, AL 35812

Abstract: Effectively transitioning science knowledge to useful applications relevant to space weather has become important. The effort to transition scientific knowledge to a useful application is not a research nor is it operations, but an activity that connects two. Successful transitioning must be an intentional effort with a clear goal and measureable outcome. This talk will present proven methodologies that have been demonstrated to be effective, and how in the current environment those can be applied to space weather transition efforts.
